Table 2-3. Assumed Minimum and Ecosystem Maintenance Flows for Simulating the Alternatives

Average Monthly Streamflow (cfs)

| Month                     | Lee Vining<br>Creek | Walker<br>Creek | Parker<br>Creek | Rush<br>Creek |
|---------------------------|---------------------|-----------------|-----------------|---------------|
| April                     | 25.9                | 1.1             | 4.2             | 31.6          |
| May                       | 75.7                | 2.5             | 7.4             | 50.0          |
| June<br>Most alternatives | 183.3               | 20.7            | 31.9            | 159.4         |
| 6,372-Ft Alternative      | 93.7                | 10.0            | 20.7            | 61.5          |
| July                      | 47.2                | 4.8             | 18.3            | 40.7          |
| August                    | 29.1                | 3.2             | 11.0            | 26.9          |
| September                 | 19.9                | 2.2             | 5.7             | 33.5          |
| October                   | 18.8                | 2.3             | 3.8             | 34.9          |
| November                  | 17.7                | 2.5             | 3.1             | 32.7          |
| December                  | 19.0                | 2.5             | 3.3             | 25.9          |
| January                   | 19.2                | 2.2             | 3.2             | 27.5          |
| February                  | 17.7                | 2.2             | 3.0             | 27.5          |
| March                     | 16.2                | 2.1             | 3.3             | 21.2          |

Note: No minimum flows apply to the No-Restriction Alternative; ecosystem maintenance flows are assumed to occur in June.
